B.E. Project

IoT based Medi-Assist System

Our project is about developing a medical application using the latest technology of Apache Kafka and Apache Storm, and it works in distributed environment for real time data. In this project huge amount of real time data is collected from sensors of the patient and is queued into Kafka and is further sent to Storm for processing. The data is stored in MongoDB and it can be viewed by doctors, Also incase of any critical situation occurring, the doctor will be notified immediately.

Academic Project

Data Synchronization (Diploma Project)

April 2014

The project consist of end to end encryption, suppose if a user wants to send the file to another user the file will be send in an encrypted form over the network and also it will get stored in encrypted form on the computer, once the file is stored in computer and if incase any unauthorized person steals that file from that computer and when he/she will open that file the data would still be in an encrypted form, thus preserving data security.

DBIT App. (Using PhoneGap)

Oct 2015

The project has been made for our college students, the features was the student can view streams, stream related subjects, access to moodle for file submission, events in our college. The App was made responsive so that it can be used on computer as well as on mobile phone.

Online Movie Booking System

Oct 2015

Coded using HTML, CSS, Javascript and PHP, the website was designed to enable users to book movie tickets online. Registered users can view the trailer and read it's description before finally proceeding to book seats. In the booking page, the user can choose the seats of his choice while looking at the seat layout and seats which are already booked and can get a notification about the same before proceeding to the payment which can be done using credit/debit card. He/she is notified if the payment transaction was successful or not. Also, users can give feedback through email facility provided in the website.

Medicare App.

April 2017

This App has been developed for course project which consist of monitoring patient via Mobile App where there are respective wards for each patient. The parameters that are monitored by the doctor are Pulse, Systolic Blood Pressure, Diastolic Blood Pressure, etc. Incase of any critical situation of the patient the ward will get highlighted and the doctor can take immediate action and can Call or SMS his/her assistant nurse if the doctor is not present at that instant.

My Portfolio

This is my personal website which tells more about myself and also the above mentioned projects are hosted on it using github pages. The following is the link to the website <https://misbamulla.github.io>

Extra-Curricular Achievements

- **Anchoring (Diploma 3rd Year)**

Dec 2013

Full time anchor for Annual Gathering.

- Obtained Knowledge of Server and Router Handling, Jetking Institute, Pune.

Hobbies

- Kho-Kho
- Carrom
- Singing
- Dancing

Skills

- HTML5
- CSS3
- Phonegap
- SQL (Basics)
- Java (Basics)
- Git
- Linux

Interests

- Networking
- Website Template Designing
- Database Handling
